

This file is made by Tongze Wang (twang141 / 1702666)

## File Explanation

- `/data/stations` contains the schedule for a specific train station (scraped from ip138.com using `trainList.py` )
- `/data/trains` contains the schedule for a specific train (scraped from ip138.com using `trainSchedule.py` )
- `/data/tripsInfo` contains the cleaned version of all the train data needed in this project (generated using `cleanData.py` )
- `/data/tripsInfoRaw` contains the raw version of all the detailed train data (scraped from 12306.cn using `trainDataRaw.py` )
- `transfer.py` contains the beta version of the train transfer search algorithm
- `jiangsu_english.csv` contains all the english names of the train stations located within Jiangsu Province
- `zhejiang_english.csv` contains all the english names of the train stations located within Zhejiang Province
- `shanghai_english.csv` contains all the english names of the train stations located within Shanghai City
- `requirements.txt` contains all pip3 dependencies needed in this project

## Libraries Used

Python3: beautifulsoup4, JSON, requests, re, numpy, pandas, selenium

In [ ]:

```
1 #!/bin/bash
2 pip3 install -r requirements.txt
```

## 1. Scrape the Data

**All the scraped data is already saved in this repo. You may use the following scripts to scrape the latest data at your own risk as it may fail in your network environment.**

You can use `trainList.py` to scrape the schedule of a specific train station. The result will be saved to `/data/stations` folder.

In [ ]:

```
1 #!/bin/bash
2 python3 trainList.py
```

You can use `trainSchedule.py` to scrape the schedule of a specific train. The result will be saved to `/data/trains` folder.

In [ ]:

```
1 #!/bin/bash
2 python3 trainSchedule.py
```

You can use `trainDataRaw.py` to scrape the raw version of all the detailed train data. The result will be saved to `/data/tripsInfo` folder.

In [ ]:

```
1 #!/bin/bash
2 python3 trainDataRaw.py
```

`trainDataRaw.py` will send about 17,000 requests to 12306.cn to scrape the data. It will take hours to complete!!! We also saved the latest data in `data/tripsInfoRaw.zip`. You can unzip it and so that it creates a folder called `data/tripsInfoRaw/`

## 2. Clean the Data

You can use `cleanData.py` to clean all the data we scraped from other websites. It will generate the `all.json` file under the `data/tripsInfo` folder as the result.

In [ ]:

```
1 #!/bin/bash
2 python3 cleanData.py
```

## 3. Try the Train Transfer Search Algorithm (Extra Part)

Note: this is the beta version of the train transfer search algorithm. This algorithm is not incorporated in our web visualization page since it's an extra part that is not required in the project due to its difficulty to build the code. This part is here because we want to show our extra efforts committed to this project. There might be bugs.

Currently, the search algorithm only consider transfer trips with one stop. Some smaller train stations may cause error in this algorithm as it doesn't have enough trains connected to bigger trains stations. The total time needed may not be displayed correctly for all the time.

We could use the following code to try to get the top 5 cheapest transfer route and top 5 fastest transfer route that could be used to travel from Shanghai Hongqiao to Hangzhou:

In [23]:

```

1  from transfer import getTransfer
2
3  start_station = 'Shanghai Hongqiao'
4  end_station = 'Hangzhou'
5
6  # also try these two:
7  #
8  # start_station = 'Nanjing'
9  # end_station = 'Shanghai Hongqiao'
10 #
11 # start_station = 'Ningbo'
12 # end_station = 'Hangzhou'
13
14 getTransfer(start_station, end_station)

```

Shanghai Hongqiao can reach 77 stations without transfer

There are 31 possible stops that can be used to reach Hangzhou from Shanghai Hongqiao in 1 transfer

Shanghai Hongqiao ----> Hangzhou with 1 transfer

===== Top 5 Cheapest Transfer Route =====

¥ 72.5 / 04 hr 49 min : Shanghai Hongqiao (07:34) ===<D2212>===> (08:09) Suzhou (08:11) ===<Z281>==> Hangzhou (12:23)

¥ 73.5 / 05 hr 47 min : Shanghai Hongqiao (07:02) ===<D2287>===> (07:20) Jinshan North (11:54) ===<G7351>==> Hangzhou (12:49)

¥ 76.0 / 01 hr 43 min : Shanghai Hongqiao (06:50) ===<G7501>===> (07:13) Jiashan South (07:52) ===<G7395>==> Hangzhou (08:33)

¥ 76.0 / 01 hr 38 min : Shanghai Hongqiao (06:55) ===<G1651>===> (07:21) Jiashan South (07:52) ===<G7395>==> Hangzhou (08:33)

¥ 77.0 / 05 hr 17 min : Shanghai Hongqiao (07:32) ===<G1341>===> (07:50) Jinshan North (11:54) ===<G7351>==> Hangzhou (12:49)

===== Top 5 Fastest Transfer Route =====

01 hr 38 min / ¥ 76.0 : Shanghai Hongqiao (06:55) ===<G1651>===> (07:21) Jiashan South (07:52) ===<G7395>==> Hangzhou (08:33)

01 hr 43 min / ¥ 76.0 : Shanghai Hongqiao (06:50) ===<G7501>===> (07:13) Jiashan South (07:52) ===<G7395>==> Hangzhou (08:33)

01 hr 45 min / ¥ 77.0 : Shanghai Hongqiao (11:04) ===<G7461>===> (11:22) Jinshan North (11:54) ===<G7351>==> Hangzhou (12:49)

02 hr 56 min / ¥ 125.0 : Shanghai Hongqiao (06:55) ===<G1651>===> (08:26) Zhuji (08:43) ===<T7786>==> Hangzhou (09:51)

03 hr 03 min / ¥ 126.0 : Shanghai Hongqiao (08:48) ===<G7104>===> (09:16) Suzhou (09:17) ===<Z85>==> Hangzhou (11:51)

You may also choose any start\_station and end\_station from the following lists.
